notes:
<Note by bobgens (Bob Gensler), 2001/05/04 08:49:02, seq: 1 rel: 0 action: open>
The routine sec_create_acl_from_data was not provided in the
initial CtSec API code drop. This routine should be provided.

Also, provide stubs for the sec_verify perm from ctx and
sec_verify_perm from cab routines, until these routines are
provided at a later time.

<Note by bobgens (Bob Gensler), 2001/05/04 08:49:29, seq: 2 rel: 0 action: assign>
Assigning this back to me for completion.

notes:

<Note by bobgens (Bob Gensler), 2001/05/21 09:44:43, seq: 1 rel: 0 action: open>

During the Linux build of programs (anything in a Makefile that

has a target name of programs) which include the revised ctsec.h

header file (temporarily called <react/ct_sec_new.h>), the following

error occurs:

/afs/aiix.kingston.ibm.com/u/bobgens/sandboxes/rdra/export/r86_linux_2/user/include/ract/ct_has.h:30

from

/afs/aiix.kingston.ibm.com/u/bobgens/sandboxes/rdra/src/ract/security/HAS/bin/cthas_test.c:22:

/afs/aiix.kingston.ibm.com/u/bobgens/sandboxes/rdra/export/r86_linux_2/user/include/ract/ct_sec_new.h:133: parse error before 'time_t'

>> ERROR: mk: Error code 256

Note that this failure does 'not' occur on AIX (and these build

environment differences are starting to become a bit annoying...).

This can be repaired by modifying the ct_has.h source code to
#include <time.h>. This is a harmless modification on the AIX
platform, and allows the Linux platform builds to complete.

<Note by bobgens (Bob Gensler), 2001/05/21 09:45:19, seq: 2 rel: 0 action: assign>

Will repair...

<Note by bobgens (Bob Gensler), 2001/05/21 09:46:12, seq: 4 rel: 0 action: modify>
Old Phase Injected: building
New Phase Injected: building

Old Target: 2001/05/21

<Note by bobgens (Bob Gensler), 2001/05/21 09:47:40, seq: 5 rel: 0 action: note>
It might seem odd to use a phaseInject of "building", but this
failure does not occur in an AIX build, and there is no logical
reason (upon examination of the source code) that this failure
should exist in the Linux environment. Yet, it does, so one is
left to conclude that some difference in the build environment is
causing this compilation failure.

<Note by bobgens (Bob Gensler), 2001/06/01 08:53:18, seq: 6 rel: 0 action: testnote>

notes: <Note by kgmas (Schmidt, Michael), 2001/05/29 19:45:06, seq: 1 rel: 0 action: open>
LX: prototype for sec_renew_identity() does not match code

The prototype for sec_renew_identity() in ct_sec.h does not match the definition in ctsec_server.c, in the 2nd argument. In the header file the 2nd argument is a time_t while in ctsec_server.c the 2nd argument is a ct_int32_t. On Linux these two types resolve to different fundamental types (long vs. int) ALL RSTC CODE MUST BE COMPILED FOR BOTH AIX AND LINUX PRIOR TO BEING CHECKED INTO CMVC. THIS SHOULD HAVE BEEN CAUGHT !!!!!

history: adddate action username

to:	if ([buff = malloc(size + 1)]) { Line 700 was changed to initialize the extra byte. So, that line went from: memset(buff, 0, size); to: memset(buff, 0, size + 1); A new library with these changes allowed the Perl commands to be run successfully. The above changes can be found in my sandbox at: /afs/alk.kingston.ibm.com/u/agar/sb/crc_test/src/rct/security/MAL/lib Now that I look at the code again, since line 702 will only be considered successful if size bytes are read, line 700 could simply be: *(buff + size) = '\0'; <Note by serban (Maarean, Serban), 2001/06/12 08:37:49, seq: 4 rel: 0 action: modify> Old Phase injected: New Phase injected: development <Note by dichung (Chung, Diane), 2001/06/14 14:29:49, seq: 5 rel: 0 action: testnote> Test accept for environment Draco of release ract_rdra. <Note by dichung (Chung, Diane), 2001/07/16 15:59:46, seq: 6 rel: 0 action: testnote> Test accept for environment Libra of release ract_rlib. <Note by pziollo (Zollo, Pearl), 2001/08/15 14:09:32, seq: 7 rel: 0 action: testnote> Test abstain for environment Pyxis of release ract_rpyxia. notes:
 <Note by bobjens (Bob Gensler), 2001/07/09 12:01:24, seq: 1 rel: 0 action: open>
 Line 667 of src/ract/MW/unix_gsm/lib/unix_support.c causes a
 core dump in the mcd daemon:
 freeCan god value;
 This core dump is likely being caused by the freeing of a NULL
 or incorrect value, which linux is far less forgiving of than AIX.
 <Note by bobjens (Bob Gensler), 2001/07/09 12:01:53, seq: 2 rel: 0 action: assign>
 Old Owner: serban

New Owner: bobjens

<Note by bobjens (Bob Gensler), 2001/07/09 12:03:46, seq: 3 rel: 0 action: accept>
 The file will be modified in two ways:
 1) Ensure that cdc is always initialized - currently, it
 is initialized only when mutual authentication is used
 2) Ensure that cdc is always initialized - currently, it
 is initialized only when mutual authentication is used
 Since I don't own the code, I don't know if this fix will allow
 ract to authenticate or not. All I know is that it should prevent
 the core dump problem. Any further fix will have to await Remant's
 return.
